Pain-free Digital Invoice Processing.

Shift to intelligent, automated digital invoice processing that feels Ahhh-mazing.

of invoices received by email are digital PDFs

Pitney Bowes Intervention Portal

PB Administration and rules management

Customer workspace management and repo management and reporting

PDF, Image, Electronic

Data Interchange,

XLS/Word

The supplier sends

the document(s) to

address. The service

multiple attachments

to an email, multiple

a receiver-specific email

automatically processes

invoices within any of the

attachments, and the body

of the email, if required.

Cloud-based Data Extraction

The service detaches the document(s) from the email. Mapping is carried out on all required data from the attachments into the required output structure.

Data **Validation**

Supplier-specific logic and business validation rules are applied to the data. Any additional data items, required for automatic ingest and processing by the receiving system, are derived.

Process

Data Enrichment

If the invoice data does not satisfy your business rules, then depending on your requirements, the original document can either be automatically rejected back to the supplier or routed to an operator to review / enrich where needed.

Data Export

Validated files are uploaded into your finance application. If the document data meets your legal and business-specific criteria, the validated electronic file is uploaded into your finance application for touchless onward processing.

Go from Argh to Ahhh-mazing

With Pitney Bowes you can cut invoice processing times down to minutes. No waiting, no frustration and no delays. Our fully managed cloud service is 100% accurate and built around your specific business needs.

Our digital invoice processing solution will interface with your existing accounts payable workflow tools and of course your finance system. Speak to us today to find out how we can help your AP team go digital.
