

Showcasing our strength in logistics sustainability.

Minimizing our impact on the environment since 1980.

Creating and implementing sustainable business practices within your logistics operations is challenging, time-consuming and expensive. So instead, many organizations prefer to focus on programs that increase efficiencies and revenue. However, the right partner can help you meet your sustainability goals without disrupting your operations.

Let Pitney Bowes show you the way to sustainability.

For over 40 years, our programs have demonstrated our commitment to the environment. We focus efforts on fleet logistics and ecommerce shipping efficiencies, energy conservation and alternative and renewable energy. One of our most important practices, partnering with the USPS® for final mile delivery, allows us to significantly reduce our environmental footprint.

Building a better environment and better business start here.

OUR USPS® PARTNERSHIP

- We leverage the USPS for last-mile delivery instead of building out a redundant, environmentally harmful infrastructure.
- Our parcels enjoy a “free” ride to their final mile destination.
- Our environmental footprint is significantly smaller than private carriers.

MINIMIZING RELIANCE ON SINGLE-USE MATERIALS

- Corrugate recycling at each fulfillment, delivery and returns facility allows us to reduce, reuse and recycle all used gaylords.
- Most of our corrugate in use today is made of at least 35% post-consumer recycled materials; some units as much as 50%.
- When possible, we leverage reusable plastic pallets in lieu of wooden pallets. On average, plastics pallets make 250 trips as opposed to only 5-6 for wooden.
- We’ve reduced our shrink wrap usage by 20% since 2019.

OUR DIFFERENTIATORS

- In 1980, our sustainability efforts were formalized with the creation of our corporate responsibility committee.
- As an EPA SmartWay partner, we’ve improved the environmental performance of our vehicles through hardware and software advances.
- We earned the 2020 Climate Leadership Award for Excellence in Greenhouse Gas Management from the Center for Climate and Energy Solutions for improving energy efficiency and driving down our environmental footprint.
- We continue to purchase Renewable Energy Credits (RECs), which support green power projects.

29.1
million

Over the last seven years, we’ve reduced energy consumption by more than 29.1 million metric kilowatt-hours.

 **193,754,000**

Since 2009, our purchases of RECs have resulted in more than 193,754,000 kilowatt-hours of renewable energy.

 **30,000**
gallons

Over 300,000 miles of driving reduced and over 30,000 gallons of fuel saved since 2019 by using route optimization software.

Continuing our commitment.

As we enter our second century in business, we believe it is important to reaffirm our commitment to the environment. Whether you work with us through any one of our fulfillment, delivery, returns or digital solutions, be assured that we are doing everything we can to minimize our impact on the environment.
