Take command of your shipping and mailing with the Pitney Bowes Shipping 360 Platform.

The Shipping 360 platform is the secure SaaS foundation shared by our suite of applications designed to reduce the complexity of shipping and mailing.

These applications work seamlessly together leveraging the Shipping 360 cloud-based platform common architecture for complete visibility and control of shipping, mailing, and receiving operations across your enterprise.

Fixes can't keep up and don't scale.

Current siloed, fragmented processes and systems waste time, cost more money than necessary, and take up valuable resources.

Lack of visibility and accuracy
for shipping and mailing expenses with data that is difficult to collect and error prone

Difficulty managing users
across multiple locations using different systems for shipping and mailing.

Confusion from users across locations
and trying to manage multiple carrier accounts and various equipment and software contracts
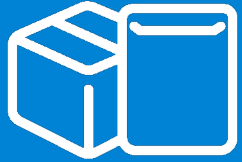

Cost increases
continue for both shipping and mailing without business rule controls
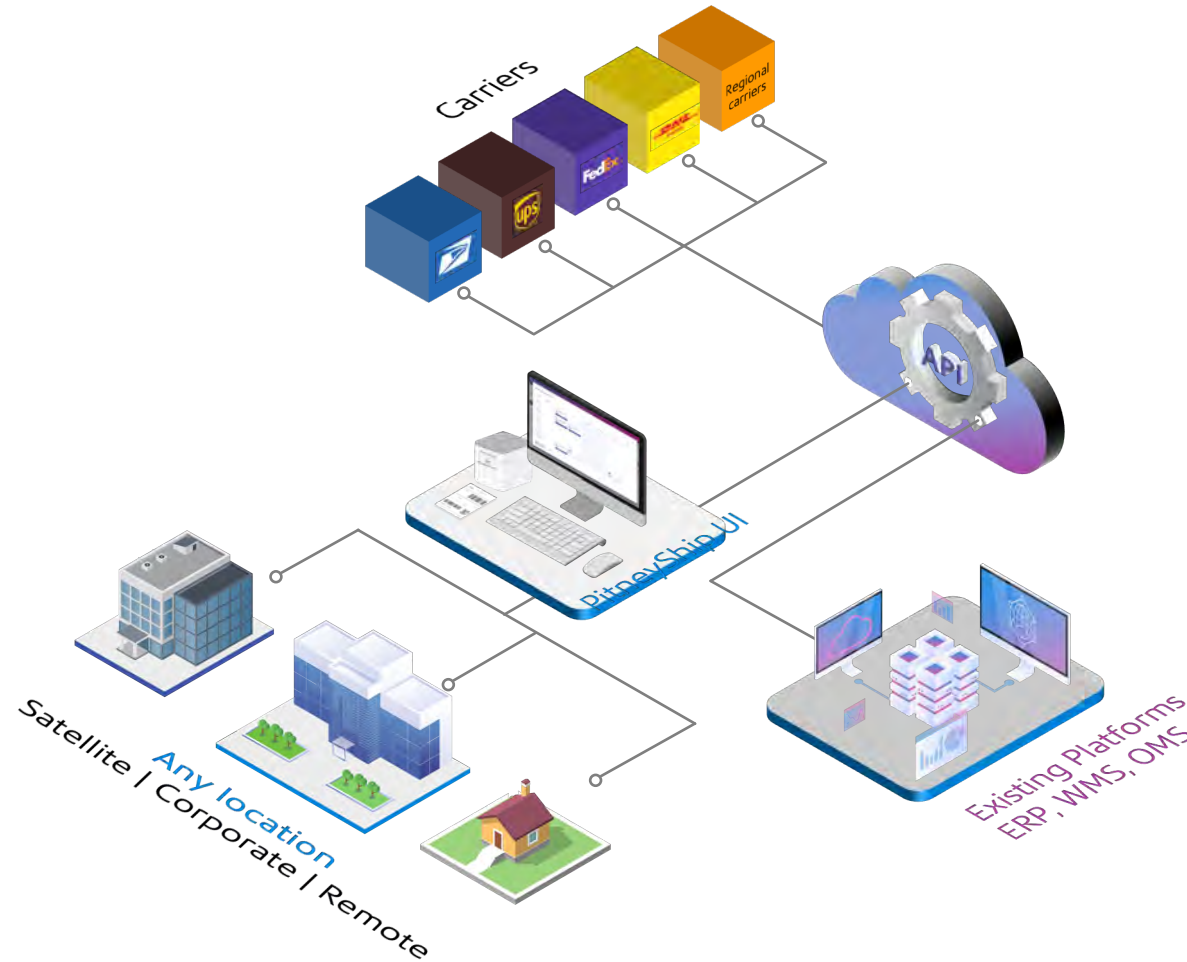

Compliance risks
with data security on the cloud and lack of chain-of-custody clarity

Shipping

Simplify shipping across your entire enterprise with tools that enable smarter shipping decisions, while centralizing management of carriers and users.
